

## Precast Concrete Solutions for *Parking Garages*

# Exeter Hospital Parking Garage

Exeter, New Hampshire

The all-precast concrete parking structure, part of the Exeter Hospital campus in Exeter, New Hampshire, features precast concrete double tees, columns, beams, wall panels and spandrel panels from Strescon Limited (Saint John, New Brunswick and Bedford, Nova Scotia).

The designers wanted the parking structure to blend in with the surrounding brick buildings on the Exeter Hospital campus. To accomplish this, the brick used on this parking structure was shipped to Bedford, Nova Scotia and applied to the precast concrete wall panels at the Strescon plant before shipped to the job site.

Architects: **Desman Associates** - Boston, MA  
Construction Manager: **Harvey Construction Corp.**  
Bedford, NH

The finished parking structure can handle 400 cars over its 127,000 square feet of parking area within the building.
