

Precast Concrete Solutions for *Parking Garages*

# Waltham Weston Corporate Center Garage

Waltham, Massachusetts

Texture, color, and detail add a mark of distinction to the architectural panels on this new parking structure for Boston Properties.

To accommodate the 300,000 square foot Waltham Weston Corporate Center office complex, a 300 car parking structure was fabricated and erected by Strescon Limited. This was accomplished in just 20 weeks.

This 120,000 sq ft parking garage was assembled with 512 precast / pre-stressed concrete structural and architectural members.

The finish of the precast / prestressed concrete spandrels has a light and medium sand blast surface.
