

Lahey Clinic Southeast Expansion

Burlington, Massachusetts

The Lahey Clinic Southeast Expansion Project

was a four-phase expansion designed to help the clinic address increasing patient demand and to introduce the very latest advances in patient care. The first phase of the Southeast Project provided an expanded surgery intensive care unit, five new operating rooms, clinical space, and 36 new medical surgical beds on the 6th and 7th floor of an existing building.

Strescon Limited was contracted to manufacture and erect 7200 square feet of precast wall panels for this project. In addition to the challenges presented by an extremely tight worksite, the new exposed aggregate panels needed to match existing panels which were over 15 years old.

Strescon's previous experience working on Lahey Clinic projects include providing precast panels to Lahey's Northshore Clinic in Peabody, MA.

From its establishment in Boston in 1923 as one of the first multi-specialty clinics in the United States, the Lahey Clinic has been an institution of innovation and are renowned as a leader in cancer care. They currently operate five facilities in Massachusetts.
